## **ABSTRACT**

An exhaust gas deNOx apparatus, which can make an NOx adsorber catalyst compact and does not impair reliability of an engine, is provided. To this end, the apparatus is provided with an NOx adsorber catalyst (9) for adsorbing and releasing NOx, and an exhaust gas recirculating circuit for mixing an exhaust gas into intake air, and exhaust gas recirculating amount control means (20, 20f) for recirculating a predetermined amount of the exhaust gas for reducing NOx 10 when the adsorbed NOx accumulation amount is a predetermined value or less, and recirculating the aforementioned predetermined amount or more of exhaust gas to bring an air fuel ratio into a rich state when the adsorbed 15 NOx accumulation amount exceeds a predetermined value and is to be released.
